Subject: Austin Application

Members:

Please note that my name is included as a part of the evaluation with regard to wastewater for this project. I have discussed the general options with the applicant and the design team. However, I have not contracted with the client and have no official capacity with the project.

At this time, the project does not pass my personal or company water quality protection requirements. However, it is my understanding that the applicant does have options on site that may be approved by county and(or) state regulation. Dr. Vaughan is a very capable soil scientist and will provide the guidance that they need to choose wastewater technology based on the soils of the site.

The main technical wastewater concern that should be answered by the applicant is what strategy will be employed to manage RV waste, which is termed a "high strength waste" and therefore requires special design considerations. I have had considerable experience in this area.

Thank you,

Hal
