Re: Edward P. Lineberger

**Soil Suitability for Domestic Sewage Treatment and Disposal Systems
816 NC Highway 751, Apex NC 27523
PIN (0712-48-0512)
Chatham County, NC**

PREPARED FOR: Mr. Larry Henson, Buyer

PREPARED BY: Christopher McGee
Jeff Vaughan

DATE: July 26, 2007

The following report is a summary of saturated hydraulic conductivity tests (K_{sat}) conducted at 816 NC Highway 751 in Apex, NC, on July 17, 2007. The tests were performed by Chris McGee of Agri-Waste Technology using a Guelph Permeameter. It is our understanding that the lot is currently owned by Mr. Edward Lineberger and will be subdivided for the purpose of constructing a single-family residence. It is also our understanding that a preliminary soils evaluation was performed by Mr. Thomas Boyce of the Chatham County Health Department. A map of the property showing the location of the K_{sat} tests is available as Attachment 1. A preliminary survey of the lot provided by Mr. Larry Henson is included as Attachment 2.

Six in-field K_{sat} tests were conducted within the proposed lot area. Tests were performed at 6" and 12" depths at each location. A summary of the field data is provided as Attachment 3. The purpose of the tests is to provide an estimated loading rate for a subsurface drip with pre-treatment septic system, with the understanding that the final loading rate will be set by the Chatham County Health Department. Results from the K_{sat} tests are detailed in Table 1 below.

Table 1. K_{sat} Results for the Proposed Lot at 816 NC Highway 751 in Apex, NC.

K_{sat} Test	Soil Depth of K_{sat} Test	K_{sat} Results	
	----inches-----	----GPD/ft ² -----	----in/hr-----
1	6	1.253	0.084
	12	1.657	0.111
2	6	0.102	0.007
	12	1.154	0.077
3	6	1.078	0.072
	12	0.632	0.042
4	6	1.296	0.087
	12	1.369	0.091
5	6	2.766	0.185
	12	2.211	0.148
6	6	2.860	0.191
	12	3.232	0.216
Arithmetic Mean 6"		1.559	0.104
Geometric Mean 6"		1.059	0.071
Arithmetic Mean 12"		1.709	0.114
Geometric Mean 12"		1.509	0.101

Results of the K_{sat} tests within the proposed lot showed that the soil would support a loading rate of up to 1.06 GPD/ft² based on most restrictive of the two depths. However, due to the nature of the soils in the area and give the type of system expected for installation, we do not recommend a loading rate exceeding 0.15 GPD/ft².

We appreciate the opportunity to assist you in this matter. Please contact us with any questions, concerns, or comments.

hensen
