Subject: RE: Search ring requests: Tank Update

Hi Angela,
I spoke with Roy last night and got the detail of the tanks. The tanks do not impact the proposed locations of the Verticality sites:

The Ball Field Tank off Lystra is in an area with strong coverage from the existing tower located approximately 1.3 miles to the north west (on top of the hill in the Governors Club). In the enclosed pdf you will see that the propagation model has it in a "green" coverage area i.e. -80dBm to -85dBm. Any carrier located on the Governors Club tower would not need a site at the water tank.

The Norwood Tank off Manns Chapel is on the fringes of the "blue" "in-building" coverage i.e. -91dBm to -85dBm, from the existing tower located at just under one mile to the south east (at the junction of Rt501/US15 and WB Cheek Rd). It is unlikely that any carrier located on this tower would want an additional site so close unless there was extremely dense residential development or a new shopping mall or similar built in the area of the water tank. The next logical site for a carrier on the existing tower would be the proposed Verticality site CH_H24.

Regards
Ian

Angela,
I will get back to you on this soonest. We originally tried to contact Roy after you and I last spoke but he was on vacation and this had not been addressed since. I have called him and left a voicemail as his message system indicates he is out today.

Regards
Ian

Ian,

I'm contacting you to see where things stand on the search ring request you submitted. We have been waiting on a letter from you regarding the feasibility to collocate on existing water towers for a couple of the areas you've applied for. Where does that stand? I have spoken to Mr. Roy Lowder with our Public Utilities Department and he has stated he has not heard from your office. Please advise me on what you want to do with your request so we can move forward.

Respectfully,
